## ***Orbis Cascade Alliance Statement of Collection Development Guiding Principles Proposed by Shared Content Team***

---

### **Purpose**

The purpose of this document is to provide an overarching framework for Alliance member libraries as they engage in both individual and consortial collection development decision-making. While each member library tailors its own collection development and access strategies to best meet local institutional needs, the document complements local policies and practices based on the recognition of the value of Alliance shared collections and work.

### **Guiding Principles**

These Guiding Principles are intended to be both proactive and responsive to the changing landscape of shared collections and to build upon the Alliance's existing strengths as it fulfills its mission and strategic agenda.

*The Alliance and each of its member libraries will:*

- Use collection development policies and practices that consider impact at the Alliance collective level and ability to share.
- Reduce unnecessary duplication of materials while balancing needs for local access.
- Engage in shared stewardship of existing resources to preserve access for future scholarship.
- Promote, expose, and preserve unique local collections and collection areas of strength as those add value to both institutional and collaborative collections.
- Make decisions for collective access to content in physical and electronic formats that take into consideration:
  - impact on the majority of membership;
  - representation of content across different disciplines;
  - availability of content via existing platforms or formats;
  - support for core academic programs and also geographical differences among the membership.
- Leverage funds to maximize return on investment that benefits all members.
- Provide data and assessment information which can inform consortial collection development decisions.
- Promote sustainable alternative publishing models that improve the current publishing landscape and support free access to scholarly content.
- Advocate for resource licensing agreements that ensure free sharing among its membership and beyond.
